Patricia A. Nolan M.D., MPH, Director
Donald L. Carcieri, Governor

Executive Summary

The Rhode Island Department of Health (HEALTH) is responsible for the licensing and regulating of bathing beach facilities in the State of Rhode Island. With help from the United States Environmental Protection Agency (USEPA), HEALTH monitors all 123 licensed beaches throughout the State. Licensed beaches include salt and freshwater, as well as public and private facilities.

The 2003 bathing season saw the largest number of beach closures and closure days since the Program's inception. Beach closures rose 148% and closure days increased 341% from the 2002 season. The dramatic increase in beach closures and closure days can be attributed to several factors.

The intensity and total volume of rainfall was much higher during the summer of 2003 (June 1 to August 31). Total rainfall increased 164% and significant rainfall rose 120%. Furthermore, with the addition of USEPA BEACH Grants HEALTH is able to focus monitoring efforts in areas of greatest concern and target sample collection for times when high bacteria counts are most likely to be present.

1.0 Introduction

HEALTH licenses recreational bathing beaches throughout the state. This authority has been granted to HEALTH through the General Laws of Rhode Island (Appendix A)¹. Regulations require HEALTH to ensure beach water meets bacteriological standards and if those standards are not met the facility's license can be suspended until bacteria levels are within acceptable limits. The mission of HEALTH's Beach Monitoring Program is to protect the public from illness associated with swimming in contaminated bathing waters.

The Department of Environmental Management (RIDEM) sets water quality standards. Rhode Island's current bathing water standards are as follows: marine bathing waters must meet a *fecal coliform* level of 50 and a *fecal coliform* level of 200 in freshwater, also not more than 10% of samples can exceed 500. The USEPA recommend marine and freshwater indicator of *enterococci* has not yet been adopted by the State of Rhode Island.

Funding for the Beach Monitoring Program is provided through USEPA grants. These funds allow for sanitary surveys, the development of a risk based monitoring plan, and increased sampling at marine beaches. Currently, USEPA grants do not provide funds to monitor freshwater bathing beaches.

2.0 Background

HEALTH began monitoring beaches in the summer of 1995. A Memorandum of Agreement (MOA) was reached between HEALTH and RIDEM, which outlined each agency's responsibilities. HEALTH is responsible for the daily operations of the program; RIDEM is responsible for testing all state run facilities and site investigation/remediation when problems persist at beaches.

Bathing beaches monitored under this program are licensed as Recreational Facilities by HEALTH. A "bathing beach" is defined as an natural area or tract of land that is used in connection with swimming and/or bathing in any waters of the state provided:

- a) It is open to the public by permit and/or payment of a fee; or
- b) It is maintained as a private club or association requiring membership fees or dues; or
- c) It is maintained with or without charge for the recreation of groups of ten (10) or more children²

Licensing requires facilities to have electrical service; refuse storage and disposal; sewage disposal facilities; the water adjacent to a bathing beach must meet

¹ R.I.G.L. Chapter 23-21

² R23-21, Amended June 1983 – "Rules and Regulations for Licensing of Recreational Facilities."

bacteriological standards; adequate toilets, showers, or lavatories with hot and cold running water; and a drinkable water supply. During the 2003 season, 123 bathing beaches met these criteria and were licensed with HEALTH as recreational facilities. Some establishments licensed prior to the adoption of the June 1983 amendments were granted exemptions from some of these requirements.

Licensed beaches are required to sample waters adjacent to their facilities at a frequency determined by HEALTH. Current sample frequencies range from monthly to weekly (see Appendix B). Each facility is required to submit samples to an approved laboratory for analysis. There is no laboratory standardization process for the analysis of recreational bathing waters; therefore, the seven laboratories certified in the analysis of wastewater in Rhode Island were deemed acceptable. Each year all licensed bathing beaches are mailed an informational packet; which identifies approved laboratories, sample collection and handling procedures, and a letter detailing the number and frequency of samples required (Appendix C).

Lab results are faxed immediately to HEALTH and the facility operator. If any action is necessary, the beach manager is notified and HEALTH's public notification procedures are followed. Our revised public notification standard operating procedure can be found in Appendix D. Upon closure, the facility is required to test daily until bacteria levels fall within acceptable limits. When it is determined bacteria levels permit the re-opening of the facility, notification procedures are followed to inform the public of the change of status. Current public notification procedures in place include; a 24 hour hotline, website (www.health.ri.gov/environment/beaches/index.html), and a standard press release which is faxed to 22 major TV, radio, and print media outlets throughout Rhode Island.

3.0 Federal Funding

3.1 EMPACT Program

Development of a comprehensive beach monitoring program began under a USEPA Environmental Monitoring for Public Access and Community Tracking (EMPACT) Grant titled Bacterial Water Quality Monitoring at Upper Narragansett Bay Bathing Beaches. This grant enabled HEALTH to establish a public notification system that included a website, telephone hotline, and a beach flagging system. HEALTH also evaluated conditions in Upper Narragansett Bay, which has long been impacted by urban runoff, point source discharges, and combined sewer overflows.

The EMPACT Program provided HEALTH the resources to sample 23 stations in the Upper Narragansett Bay (7 stations were located at licensed beaches) in wet and dry weather. The conclusion of this study determined that additional sampling was needed at the licensed Upper Bay beaches to adequately protect the public. Also, it was determined that areas north of Cominicut Point in Warwick and Nayatt Point in Barrington were not suitable for licensing at this time. Water quality, especially during wet weather, represented an unacceptable risk to public health.

3.2 BEACH Program

In 2000, Congress enacted the Beaches Environmental Assessment and Coastal Health (BEACH) Act, an amendment to the Federal Water Pollution Control Act (a.k.a. The Clean Water Act) (see Appendix E), which authorized USEPA to distribute grants to eligible states and Indian tribes to reduce the risk of disease and illness in the nation's bathing waters. State objectives under this program were published by the USEPA in June 2002. The National Beach Guidance and Required Performance Criteria for Grants document outlined several requirements of the BEACH Act which include: a list and categorization of beaches according to risk, identification and mitigation of sources of pollution that may have an impact on bathing waters, the development of a risk communication plan, and providing USEPA with specific beach monitoring information³. The BEACH Grants have provided HEALTH the resources to vastly improve the beach monitoring program and develop a broad base of knowledge at Rhode Island's licensed beaches.

3.2.1 Sampling

HEALTH currently has federal funds available to monitor all 73 licensed marine bathing beaches. In the 2003 Bathing Season, 1378 samples were collected and analyzed for both *fecal coliform* and *enterococci*. Testing for both indicators allows HEALTH to evaluate *enterococci* and prepare for the required April 10, 2004 implementation of the new indicator, as required in the Clean Water Act.

Sample frequencies at all beaches were increased to provide HEALTH an expanded view of water quality throughout Rhode Island waters. Beaches that were previously exempt from monitoring activities were sampled, and beaches with known problems were sampled at a much greater frequency. The sample results are required to refine HEALTH's risk based monitoring plan.

3.2.2 Flagship Beaches

During the 2002 season, HEALTH and the USEPA designated three Flagship Beaches: Goddard Park in Warwick, Warren Town Beach in Warren, and King Park Swim Area in Newport. The Flagship Beach designation was given to beaches that have had a history of closures and extended periods of poor water quality. The USEPA expects to see marked improvement in water quality and a reduction in beach closures in the next five years. Recent activities at these beaches are found below.

Goddard Park, Warwick- A sanitary survey was conducted in conjunction with RIDEM's Total Maximum Daily Load (TMDL) Program to identify any potential sources of pollution at this facility. Additionally, HEALTH serves on an advisory committee for the creation of a Special Area Management Plan (SAMP) in Greenwich Bay. The Coastal Resources Management Council (CRMC) obtained a grant to develop this management plan. HEALTH's main SAMP objective is

³ 33 U.S.C. 1362 sections 104, 303, 406, 502, and 518(e)

the reduction of pollutants carried into Greenwich Bay through stormwater. Non-point surface runoff is the major problem affecting water quality in this area.

Warren Town Beach, Warren- Warren Town Administrator Michael Abbruzzi has pledged his commitment to improving conditions at the town beach. HEALTH conducted a site evaluation with RIDEM, PARE Engineering, and Warren Department of Public Works Director John Massed. Two stormwater pipes located on the beaches were identified as a major contributor to poor water quality at this facility. A sewer overflow pipe located approximately 6 feet from the suspect stormwater pipes was in disrepair and subsequently “slip-lined”. Wet weather sampling activities showed dramatic improvement in bacteria levels, but HEALTH will continue to assess conditions in this area.

King Park Swim Area, Newport- The City of Newport and the Coast Guard inspected several boats anchored just offshore from this facility in the summer of 2002. One boat was found to be discharging wastewater directly into Newport Harbor and was cited for this violation of Rhode Island’s “No Discharge” Law. In addition to the extremely large number of boats surrounding this facility, the Wellington Avenue combined sewer overflow (CSO) is located approximately 250 yards from the bathing area. This CSO discharges sewage into Newport Harbor after heavy rainfall. Controls are planned for the Newport wastewater treatment plant to correct this problem; however, they will not be completed for several years.

4.0 Summer of 2003 Results

4.1 Sample Results

Additional sampling conducted under the BEACH Program allowed HEALTH to supplement sampling at all licensed marine beaches. Appendix B illustrates the testing frequency, the number of tests, the number of violations, and the range of violations. All samples collected in the 2003 Bathing Season can be found in Appendix F. Appendix F includes sample activities at freshwater facilities, which are not funded under the BEACH Grant.

The number of samples collected can measure program growth and the level of public protection offered by the Beach Monitoring Program. The number of samples has increased, from 281 in 1995 to 2567 in 2003. The sample effort increased 69% from 2002 as a result of the extremely wet summer season. The number of facilities tested has increased from 82 in 1997 to 123 in 2003. Eliminating sampling exemptions for open ocean beaches accounts for the increase in the number of facilities monitored.

4.2 Closures

In 2002, there were 27 closures totaling 103 closure days. In 2003, there were 67 closures totaling 454 closure days (see Appendix G). This represents a 341% increase in

closure days from the 2002 bathing season with a 69% increase in sample effort (1779 samples taken in 2002 and 2567 samples taken in 2003). The increase in beach closure days can be attributed to a 120% increase in significant rainfall (>0.5" in a 24-hour period) from June 1-August 31 at the TF Green rainfall gauge. Overall rainfall increased from 5.67" in 2002 to 14.96" in 2003, a 164% increase in total rainfall⁴.

Furthermore, with the addition of USEPA BEACH grants HEALTH now has the ability to intensively sample areas where known bacteria problems exist. Areas located north of Prudence Island are sampled several times weekly during the summer because of known bacteria issues in the upper reaches of Narragansett Bay. This intensive sampling means HEALTH can now more easily identify times when water quality is not acceptable in these areas. This will further protect public health, but it will also result in an increase in the number of beach closures. The following charts document the percentage of closures attributed to several towns.

Table 1. All Beaches for the 2003 Bathing Season-454 Closure Days

<u>Percentage of Closures</u>	<u>City/Town</u>	<u>Closure Days</u>	<u>Facilities Closed</u>
46%	Warwick	210	City Park, Conimicut Point, Goddard Park, Gorton Pond, Oakland Beach, Kent County YMCA
17%	Warren	78	Warren Town Beach
7%	Newport	32	Easton's Beach, Fort Adams, King Park Swim Area
6%	Barrington	28	Barrington Town Beach
6%	Bristol	26	Bristol Town Beach
5%	North Kingstown	23	Camp Grosvenor, North Kingstown Town Beach, Saunderstown Yacht Club

Table 2. Saltwater Beaches for the 2003 Bathing Season-385 Closure Days

<u>Percentage of Closures</u>	<u>City/Town</u>	<u>Closure Days</u>	<u>Facilities Closed</u>
46%	Warwick	177	City Park, Conimicut Point, Goddard Park, Oakland Beach
20%	Warren	78	Warren Town Beach
8%	Newport	32	Easton's Beach, Fort Adams, King Park Swim Area
7%	Barrington	28	Barrington Town Beach
7%	Bristol	26	Bristol Town Beach
6%	North Kingstown	23	Camp Grosvenor, North Kingstown Town Beach, Saunderstown Yacht Club

			Area
6%	Lincoln	53	Camp Meehan, Lincoln Woods State Park
6%	Middletown	51	Atlantic Beach Club, Third Beach
3%	Barrington	28	Barrington Town Beach

4.2.1 Greenwich Bay

As has been the case in previous years, coastal beaches in the City of Warwick have accounted for almost 50% of all closures. Through RIDEM's TMDL Program, comprehensive management actions will be taken, but their benefit will not be known for several years. In cooperation with the TMDL Program, CRMC's Greenwich Bay SAMP will focus on all aspects of pollution sources within the Greenwich Bay watershed. A draft SAMP proposal should be released in the spring of 2004.

Table 5. *Warwick Marine Beaches*

<i>Bathing Season</i>	<i>Samples Taken</i>	<i>Closure Days</i>	<i># Significant Rainfall Events</i>
2003	630*	177	11
2002	347*	34	5
2001	235	62	7
2000	342*	16	4
1999	189*	8	2
1998	47	68	8
1997	21	No Data	6
1996	21	No Data	No Data
1995	7	No Data	No Data

*USEPA funded sampling included in this figure

HEALTH's sampling effort in Greenwich Bay increased by 82% this season, the number of closure days increased 421%. The 2003 bathing season was extremely wet, there were 11 significant rainfalls (>0.5" in 24-hours) and total rainfall increased 164% over 2002 totals⁵. Table 5 illustrates the relationship between closure days and the number of significant rain events since 1995. The combination of excessive rainfall and warm water temperatures (which reached over 80 degrees F⁶) in Greenwich Bay contributed to the extremely high number of closures.

The excessive rainfall contributed to the highest level of summer sewage discharges since HEALTH began tracking total volume. In the 2002 bathing season (June 1 to August 31) there was a total volume of 78.9 million gallons of sewage discharged. During that same period in 2003, there was a total volume of 268 million gallons discharged⁷. This represents a 240% increase in volume of sewage discharged after rainfall.

5.0 Future Activities

5.1 Geographic Information Systems

The Beach Monitoring Program has hired a contract employee to develop Geographic Information Systems (GIS) capabilities. GIS will improve the accuracy sample

⁵ <http://www.erh.noaa.gov/box/dailystns.shtml> NOAA Northeast Environmental Climate Data website.

⁶ RIDEM YSI deployment-August 2003.

⁷ RIDEM reporting after a sewage discharge event.

collection, identify potential pollution sources, catalog known source of pollution, and assist in the development of a beach closure model based on rainfall. The Beach Monitoring Program staff feel strongly that GIS capabilities will greatly improve the ability to protect the public from swimming in contaminated bathing waters.

5.2 Web Based Data/Public Notification System

HEALTH is currently in the process of purchasing software to manage all beach related data and perform statistical analysis on that data over a web base platform. This system provides the public with all sample data, open/closed status, and general beach information. Furthermore, all public notification procedures could be conducted at the touch of a button from any computer worldwide. A 24 hour telephone hotline, website, and a pre-approved list of media outlets could be notified instantaneously after the decision to close a beach has been made. This system also allows HEALTH to transmit beach related data, as required under the BEACH Act, with incredible ease. The alternative to this system is the entering of data into the USEPA's current system STORET.

5.3 Standards

In preparation for adoption of the USEPA's new indicator, additional sampling was conducted during the 2003 season to build a greater baseline data set for *enterococci*. HEALTH expects the adoption of the USEPA's new indicator for the 2004 season.

2003 Beach Closures

Beach	Days Closed	Problems
Atlantic Beach Club	5	Stream, Pump station
Barrington Town Beach	28	Run-off, Providence CSO
Bonnet Shores Beach	3	Stream, Wildlife
Bristol Town Beach	26	Run-off, Providence CSO
